Audio Enhancement and Personal Sound Profile

Our accompanying mobile app can measure your hearing ability and create an enhanced sound profile to deliver an audio experience unlike any other – all in a minute! The profile is automatically saved to MyAudioSession headphones, so you don't have to keep accessing the app repeatedly.

MyAudioSession uses award-winning technology that maps your hearing sensitivity to different frequencies and then adjusts your music based on your audio profile.

50mm Titanium Drivers

Specifically chosen for their incredible strength-to-weight ratio, we apply a thin coating of titanium to our Mylar drivers to guarantee that the diaphragm is light and precise enough to resonate clear, high-fidelity sound across the spectrum.

aptX-HD

Our Bluetooth solution is one of the most advanced in the world, capable of producing wireless, 24-bit HD audio to ensure unparalleled sound quality.

Wireless Charging

MyAudioSession is compatible with Qi wireless charging, enabling you to charge the headphone without any cables.

Up to 30 hours Playtime

Want to enjoy your listening experience for an extended period of time? With up to 30 hours of playtime on a single charge, you can enjoy personally-tailored music at home or on-the-go.

Smart Pairing

We want to give you the most streamlined experience – pair your mobile phone with MyAudioSession headphones effortlessly through NFC and skip the hassle.

Memory Foam Ear Cushions

What's a great-sounding headphone without an equally fantastic wearing experience? Our plush, memory foam ear cushions ensure that you remain ultra-comfortable while keeping the headphones firmly secured.

Who Are We?

From humble beginnings as a Hong Kong-based company, the members of The Audio Session have been involved in the design and development of personal audio equipment with major industry leaders around the world for over 30 years.

Our latest project, MyAudioSession, aims to unite our decades of audio expertise with innovative sound-personalization technology to create an acoustically superior headphone that can enrich the user's enjoyment of music.
